

ATTENTION!

An invasive tropical mosquito *Aedes aegypti* has been identified in York.

This is the first time the mosquito has been identified in Nebraska.

This mosquito can spread dangerous infectious diseases, including:

-  Zika virus
-  Dengue virus
-  Yellow Fever virus
-  Chikungunya
-  Other diseases

We still have a chance to get rid of it, **IF YOU HELP!**

This mosquito grows in water that is sitting in containers or objects, NOT pools or floodwater areas.

1. Please **LOOK** around your property and at the area surrounding your property weekly.
2. Please **DUMP** anything containing standing water (see images on the back).
3. Please **REMOVE** anything unwanted or unneeded that can collect water.
4. Please use a “mosquito **DUNK**” for anything that is collecting water and cannot be removed.

For more information please call Four Corners Health Department at 402-362-2621
or go to www.fourcorners.ne.gov.

Good Life. Great Mission.

DEPT. OF HEALTH AND HUMAN SERVICES

PH-OTH-34 9-19
