

PACIFIC SOUTHWEST CENTER OF EXCELLENCE IN VECTOR-BORNE DISEASES

We're hiring a summer intern!

Oregon detected the invasive mosquito species *Aedes aegypti* for the first time last year and we need your help to track it! This mosquito bites during the day and has the potential to transmit viruses like Zika and dengue. Intern with us this summer at the Jackson County Vector Control District in Central Point, Oregon, where you'll gain hands-on biological field experience, including mosquito surveillance and identification. Your paid summer experience will culminate in a presentation at a state or regional vector control meeting in 2026. You'll also join a network of trainees in the region to continue building your skills and network, which could lead to potential future career opportunities.
